SUMMARY

Backend Developer with 1+ years of experience designing and developing scalable web applications, RESTful APIs, and cloud-native solutions using Node.js, TypeScript, Laravel, AWS, and Docker. Proven track record of reducing infrastructure costs by **30%** through serverless architecture implementation and improving application scalability through containerized deployments. Experienced in API development, database design, microservices, CI/CD pipelines, automated testing, and cloud infrastructure.

EXPERIENCE

Backend Developer 04/2025 to Current

DES DIGITAL MARKETING Sdn Bhd, Subang Jaya, Selangor

Tech Stack:

Node.js, TypeScript, AWS Lambda, OAuth 2.0, Docker, AWS ECS, PHP, Laravel, MySQL

- Designed and implemented AWS Lambda-based authentication services with OAuth 2.0, reducing infrastructure costs by 30% while improving scalability and maintainability.
- Containerized backend services using Docker and AWS infrastructure, enabling auto-scaling and reducing server traffic load by 45%.
- Refactored legacy backend modules following SOLID principles, improving code maintainability, readability and development efficiency.

Backend Developer 09/2024 to 12/2024**IP ServerOne Solutions**, Petaling Jaya, Selangor

Tech Stack:

Laravel, PHP, MariaDB, Docker, Kubernetes

- Contributed to building NovaCloud Hosting, a multi-region cloud platform that reduces latency by routing users to the nearest servers, improving load times and accessibility.
- Developed and maintained RESTful APIs using Laravel and PHP for NovaCloud Hosting, ensuring high availability and performance across multi-region deployments.
- Implemented automated unit testing frameworks that improved code reliability and reduced pre-production defects.

Full Stack Developer 07/2023 to 12/2023**Fusionex Group**, Petaling Jaya, Selangor

Tech Stack:

Vue.js, Node.js, Express.js, MongoDB

- Spearheaded the development and deployment of a custom transportation web application using VueJS, Express, NodeJS and MongoDB, boosting user session time and daily active users through enhanced UI/UX design.
- Developed and integrated a handwriting recognition module using machine learning techniques, improving document processing efficiency and user satisfaction.
- Collaborated within Agile Scrum teams, participating in sprint planning, backlog refinement, and daily standups to accelerate project delivery.

EDUCATION

UNIVERSITY MALAYA, KL, Malaysia**(Bachelor) Information System**, 01/2025

- Programme Unit of Students' Union
- Participant of UMHackathon
- Contest Protocol Committee of Programming League National
- GPA: 3.78/4.00

JOHOR MATRICULATION COLLEGE, Johor, Malaysia**(Bachelor) Science Stream**, 12/2019

- GPA: 4A, 5B

SULTAN ABU BAKAR SCHOOL, Pahang, Malaysia**(SPM) Science Stream**, 12/2019

- GPA: 4A, 5B

SKILLS

Category	Skills List
Technical/Hard Skills	NodeJS (Serverless), Typescript, Javascript, PHP/Laravel, AWS, Docker, NextJS, ShadcnUI, MaterialUI, TailwindCSS, ReactJS, VueJS, Angular, Java, Python, Flask, MySQL, MongoDB, FireBase, Postgres, Prisma, Sequelize, Supabase, GCP, CI/CD, RESTful API, OAuth 2.0, Git, Agile, Scrum, API Development, Database Design
Soft Skills	Problem-Solving, Communication, Adaptability, Project Management, Critical Thinking, Positive Thinking,
Software/Tools	Cursor, VSCode, Codex, Claude Code, Slack, Excel, My Sequel Ace, DockerHub, Notion, Terminal, Github, GitLab, Jira

PROJECTS

Water Potability Prediction, 11/2024 to 01/2025

- Successfully deployed a water potability prediction application, enhancing public awareness and accessibility to safe drinking water data through interactive data visualizations.
- Configured and tested multiple machine learning models using NextJS and server-side analytics, reducing system complexity.
- Conducted extensive exploratory data analysis (EDA), which provided insights that led to a 15% improvement in model predictive efficiency.

Student Sport Portal, 03/2024 to 01/2025

- Built a full-stack portal using Next.js, simplifying deployment and reducing system complexity.
- Developed an event management module with complete CRUD functionality for a user-friendly experience.
- Automated certificate generation, reducing manual effort by 30%.
- Implemented Google OAuth 2.0 for secure authentication and improved data protection.
- Designed dashboards with real-time data visualization to support admin insights and decision-making.

Ecommerce Sport Website, 03/2024 to 06/2024

- Successfully launched and hosted the e-commerce site on Vercel's free tier, focusing on technical implementation and performance optimization.
- Integrated multiple payment gateways to demonstrate seamless transaction processes in a simulated environment.
- Developed a comprehensive order management system, which streamlined simulated order processing workflows and demonstrated effective backend functionality.
- Implemented blogs and event registration features to enhance the site's content management capabilities and showcase interactive web features.
